This Week September 15th 2016

For many decades, probably since the invention of motorized transportation, humans have constantly dreamed about autonomous vehicles. Today, we are only years away from the realization of this dream, and witnessing an evolution leading to a transformative future of autonomous transportation

systems.

Our future transportation systems are expected to be highly and intelligently autonomous, causing significant disruptive and transformative impacts on our lives; socially, economically and environmentally. The presentation will portray many of the leading facets of urban transportation automation, including intelligence in vehicles, infrastructure, system operation, and information. The presentation will include insights about the potential impacts and explore various potential challenges and possible opportunities of our intelligently autonomous transportation future.

Last Week September 8th 2016

Brett Taylor of Patino Entrepreneurial School

The world economy is changing, but the educational system continues to prepare students for a past that no longer exists. Teaching students an entrepreneurial mindset can prepare them for the world they will enter. At Fresno Unified, we have built the Patiño School of Entrepreneurship, a magnet high school, to teach the entrepreneurial mindset and create students who can innovate. Not only will they be stronger for it, but so will Fresno.

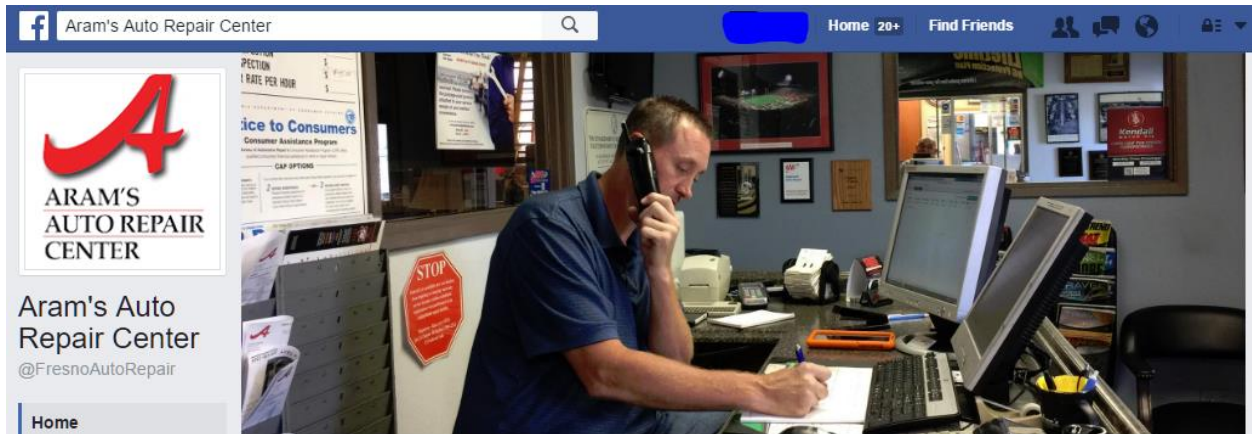

Dr. Brett Taylor has focused his work on creating an educational system that will engage students and prepare them for a changing world. He spent 9 years in the Hanford Elementary school district, 2 years as the principal at Duncan Polytechnical High school, and the last two years as the founding principal at the Patiño School of Entrepreneurship.

Rotary Highlights

You should read what people say about the service they receive at Aram's business. He is another great example of a North Fresno Rotarian setting a high professional standard.

Thanks, Aram!
